

## KEY ATTRIBUTES

- Design & Build Refurbishment
- Restricted Working
- Education

## ST. PAUL'S WAY FOUNDATION SCHOOL

This project involved the design and build refurbishment internally and externally of a community centre into a Modern Infant School Teaching facility, including extensive Mechanical, Electrical and ICT provision.

External works were required in forming a new playground and perimeter fencing, including new external canopies and new landscaped areas.

Whilst works were carried out in a vacant building, close liaison was maintained with an adjoining Mosque.

The close communication and integration with the school and multi-client groups was facilitated with a complete collaborative project managed around a significant Risk management programme.
